CONNECTIONS/ Fall Issue/2021

How the Pandemic Changed the Game... and How You Can Win

We made it! Fall is about to begin and time to get our customers set for colder weather ahead. *But what if Covid is still bedeviling your marketing, new customer growth, retaining and finding good employees?*

The focus of the Annual Meeting, on September 29, 2021, will give you ideas and approaches that you can implement specifically for Consumer Marketing, Employee Retention and On-boarding New Employees as we continue to live in a Covid environment.

Our speaker is **Amanda Bacon-Davis**, President of the business consulting firm, Savvii Strategies. She is a former division director in the retail propane industry and she was named a Rising Leader in the propane industry by *LP Gas Magazine*.

Other items of interest at the meeting will be an up to date report on propane challenges that will be effecting us from Eric Sears, NPGA Manager, State Association Relations. We will also be hearing about some new developments on the West Virginia legislative front and expect to be adding one or more other items of help so check your email.

The Annual Meeting takes place starting at 9:15 am ET (*though we will have a virtual coffee break starting at 9 am*) on Wednesday, September 29, 2021.

Registration is **FREE** for current (2021) dues paying members and their employees. Complete and scan the registration form or send an email to wvpga@aol.com giving name(s) & company.

Non-Members must pay a \$25 fee via the website (www.wvpropanegas.org) and, if they join for the 2022 membership year, will have the \$25 credited to the final dues (call 703-530-9772 to make arrangements).

YOU MUST PRE-REGISTER by September 24, 2021 to get the Zoom meeting link.

SQTG Leak Check & Regulator Test Kits

Perfect for Servicemen

The SQTG kits are ideal for bobtail drivers and service personnel that conduct leak check and regulator pressure testing

The SQTG kits contain four pressure gauges:
a) 30 psi gauge for pressure tap valves in the outlet of a first-stage regulator, or intermediate pressure of an integral two-stage regulator.
b) 300 psi (with high pressure test block) for systems with no regulator pressure taps
c) 5 psi gauge for testing set and lockup pressure in 2 psi regulators
d) 35" WC gauge for use in second-stage regulator leak testing. The hose assembly has an inlet swivel connection for attachment to the pressure tap valve. The outlet connection is a high pressure (300 psi) industrial quick disconnect coupling for attachment to any of the included gauges.
